

VSS Satellite

Opening and Motivation

Segment	Lead	Time	Content
Opening Remarks	Ratan	3 min	Welcome participants, highlight invited speakers, and frame the workshop's goal.
Keynote Talk	Nancy	5 min + 3 min Q&A	A short vision talk on the educational use in both replicating old experiments /exploring new experiments.
Workshop Overview and Platform Introduction	Ruolin	5 min	Introduce the overall structure of the workshop and briefly present the core idea and interface of the platform.

Session 1: Looking into the Past

Using Models to Replicate Published Findings

Segment	Lead	Time	Content
Invited Vision Talk	Brad Duchaine / Antonio	5 min + 3 min Q&A	The speaker shares concrete experience using models to replicate a published paper, and reflects on how this type of computational replication could support their own research and influence future scientific workflows.
Encoding Models as Predictive Tools	Mayukh	5 min	A brief technical introduction to how encoding models work as predictive tools.
Walkthrough: Replicating One	Ruolin	5 min	Walk participants through one complete example of using the

Segment	Lead	Time	Content
Experiment			platform to replicate a published experiment.
Participant Hands-on Exploration	Participants	10 min	Participants try replicating additional experiments provided on the webpage, or test their own experiments/stimuli using the platform.
Group Discussion	All	10 min	Participants share their experience, insights, questions, and initial reflections on what model-based replication can and cannot reveal.

Session 2: Looking into the Future

Using Models to Help Plan fMRI Experiments

Segment	Lead	Time	Content
Invited Vision Talk	Martin Hebart	5 min + 3 min Q&A	The speaker discusses how computational models could support new experimental design, hypothesis generation.
Walkthrough: Simulating a New Experiment	Ruolin	5 min	Demonstrate a complete experimental simulation pipeline, including uploading stimuli, running models, comparing predicted responses across conditions, and interpreting the results.
Participant Hands-on Exploration	Participants	10 min	Participants use the drag-and-drop executable modeling framework to test current experimental designs, or untested ideas across several computational models.
Group Discussion	All	10 min	Participants share.
